3 STEPS TO USING EXTENSIONS IN QLIK SENSE

STEP 1: SOURCE IT!

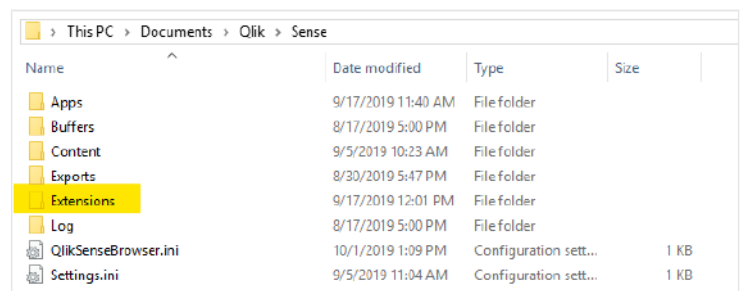

First you need to find the extension you are looking for. A couple of places you can download it:

- Qlik Branch Garden
<https://developer.qlik.com/garden>
- GitHub - search "Qlik Extensions"
<https://github.com/>
- Many others, why not try a Google search

STEP 2: INSTALL IT!

Once downloaded, the whole package needs to be copied to its own folder in the Qlik Sense user settings location, under the Extensions folder (in unzipped format).

The default location for this is:

C:\Users\%userprofile%\Documents\Qlik\Sense\Extensions

* If you have chosen a custom path during installation, ensure to find the Extension folder there.

STEP 3: USE IT!

After copying it to the correct location, you will need to restart Qlik Sense for it to be ready for use.

Once restarted, you can find it under

Assets >> Customer Objects >> Extensions
